Why the fixed half-weight comparison reverses
V(0.5) - V(1) = B - 0.75 C
ChildPlay: primary budget 1032
Half minus full variance = -0.0098
Variance contribution (pp²)
0.0191
0.0289
B
0.75 C
UCO: primary budget 521
Half minus full variance = +0.2558
0.8803
0.6246
Two fixed weights; no search
Half/full exact design RMSE ratio
ChildPlay
UCO
Nominal label budget (%)
Post-hoc description of locked allocations and finite populations. No new query, model fit or weight search.
Different datasets, backbone-family exposure and upstream geometry preparation prevent a causal dataset/prevalence claim.
